Attn: Mr. Rodney A. Smith  
District Engineer

Dear Sir:

Attached herewith is form 9-331, Supplementary Well History covering work recently completed on our Castle Draw U.S.A. #1, Duchesne County, Utah.

On October 28, 1968 two upper zones of this well were opened to production by perforating at intervals 3568-3578 and 3786-3794' with four shots per foot. Production prior to perforating was 14 BOPD. Present production is 20 BOPD. Figure 1 attached shows the present condition of the well. Oil is being pumped from all perforations simultaneously with production from both zones being commingled in the wellbore.

The six BOPD increase obtained by perforating the two upper intervals does not in our judgement economically justify the second string of tubing which would be required to separately produce the upper and lower zones.

Oral approval was obtained by telephone from Mr. Rodney Smith prior to making this completion.

Yours very truly,

#### Operator Overview

According to Susan Baker (918)491-4175, their ownership of three oil wells in Duchesne county came by acquisition from Union Oil Company of California. Baker says that these are the only wells that they own here in Utah. Most of the production Medallion owns and operates is in Oklahoma, Texas and Louisiana; however, they also operate lease properties in New Mexico and Wyoming.

When asked about future drilling activity in Duchesne county, Baker's response was that she didn't know. According to Baker, the Engineer who would know was not in the office today.

All produced crude oil is sold to Chevron, and either trucked by them or hired out to other contractors. Baker thought water disposal was by evaporation; however, there aren't any pits or tanks for that purpose. These wells either produce no water or have to have an occasional load pulled from production tanks.

The three wells reviewed indicated no sales lines or meters present for gas sales. However, a one inch plastic pipe does connect the three wells for casing gas. This commingling of casing gas allows the operator to run equipment on a well after a hot oil job without purchasing anymore propane than necessary. The operator does, however, have propane tanks on leases for a backup fuel system.

Non-compliance issues regarding state Oil and Gas Conservation Rules were non-existent on these three lease. Jim Walker with WM Enterprises contract pumps these leases and has kept them clean and up-to-par with field standards.

Pool Energy Services, Houston, recently completed a \$7.5 million upgrade of a cold-stacked platform drilling rig at its Harvey, La., facility. The modified rig, redesignated Pool Rig 18, now features a top-drive drilling system, a small footprint and the ability to be rigged up without the assistance of a crane barge. The rig recently began operations for Shell Offshore Inc. under a term contract in the Gulf of Mexico.

utilizes the TLP concept. It enables marginal or unproven deepwater fields to be produced cost-effectively by using one or more small TLPs.

Chevron Corp. and NGC Corp. will form a partnership to own and expand Chevron's natural gas complex in Venice, La. The complex, 75 miles southeast of New Orleans, handles natural gas produced by a growing number of Gulf of Mexico projects. The processing plant will be expanded to handle 1.3 Bcfd and will cost up to \$100 million.

Apache Corp., Houston, has brought onstream 25 MMcfd of new production in the Gulf of Mexico. Off the coast of Texas on Galveston Block 300 an Apache-operated platform is producing 25 MMcfd and 628 bc/d from two wells drilled on blocks 300 and 301. The discovery well, Apache's Galveston 300 #1, was completed in November 1995 flowing 11.4 MMcfd and 330 bc/d from the RM-5 sand perforated at about 13,800 feet. Apache owns a 100% working interest in this acreage and is using a salvaged platform from another offshore block.

## Newsline

Coastal Field Services Co., a subsidiary of The Coastal Corp., Houston, has acquired a one-third interest in Main Pass Gas Gathering Co., operator of the Main Pass Gas Gathering System serving the Main Pass region of the Gulf of Mexico, offshore Louisiana and Mississippi. The system has a throughput capacity of 358 MMcfd and so far has seen throughput of up to 200 MMcfd. Development in the area is expected to produce enough gas to exceed system capacity soon.

### MIDCONTINENT

KCS Energy, Edison, N.J., will buy InterCoast Oil and Gas Co., owned by Mid-American Energy Co. of Des Moines, Iowa. InterCoast has 220 Bcfe of reserves in North Texas, Oklahoma and northern Louisiana on properties producing an average of 64 MMcfd
